TODAY'S BIG NEWS

RBI hiked the repo rate today.

The first hike since February 2023. All 6 MPC members voted for it.

REPO RATE

5.25% → 5.50%

before — from today

+0.25%, or 25 basis points

Stance changed to **"calibrated tightening"**

CPI FORECAST FY27

5.2%

raised from 5.0%

GDP FORECAST FY27

7.1%

raised from 6.7%

WHY NOW?

Brent > $100

oil, and inflation spreading (CPI 4.8% in Aug)

VOTE

6 - 0

4 of 6 backed the stance change

"Tightening means a rate cut is off the table." Governor Sanjay Malhotra

WHAT THE GOVERNOR SAID

12 things RBI told us today, in plain words.

1. **Repo 5.50%, SDF 5.25%, MSF 5.75%**
   All three rates up 0.25%.
   → *Every loan rate in the system moves up a bit.*

2. **"Rate cuts are off the table"**
   Next move can only be a hike or a pause.
   → *Don't wait for cheaper loans soon.*

3. **Inflation forecast 5.2% (was 5.0%)**
   Peak about 6% in Oct-Dec.
   → *Prices will rise faster for the next few months.*

4. **Inflation is spreading**
   37% of the CPI basket is above 4%. Sugar +34%, onion +85%.
   → *It's not one item anymore. Kitchens feel it.*

5. **Growth forecast 7.1% (was 6.7%)**
   Q1 grew 7.8%. Demand is broad.
   → *The economy is strong enough to take a hike.*

6. **Oil: September basket $116**
   RBI now assumes $95 a barrel.
   → *Oil is the biggest risk to every forecast.*

7. **West Asia war "re-escalated"**
   The main reason for today's hike.
   → *Peace would change the whole picture.*

8. **Monsoon 13% short, El Niño**
   Risk to winter crops and rural demand.
   → *Food prices could stay high.*

9. **Rupee: "will find its correct value"**
   RBI smooths swings, no fixed level. Forex $735 bn.
   → *RBI won't defend a number, but has a big cushion.*

10. **Surplus cash being drained**
    About ₹5.9 lakh cr a day absorbed.
    → *So the hike actually reaches your loan rate.*

11. **Banks are healthy**
    Credit growth 18.1%. Gross NPA just 1.67%.
    → *No banking stress. Lending is booming.*

12. **2 new rules by 31 Dec**
    Account aggregators work with each other; bank balances in your demat statement.
    → *Your savings and shares in one view.*

WHAT IT MEANS FOR YOUR LOAN

Your EMI depends on which kind of loan you took.

FLOATING RATE

most home loans

EBLR
(external benchmark)
tied straight to the repo rate. Moves within about 3 months.

MCLR
(bank's own cost)
moves slower, reset every 6 to 12 months.

68%+ of bank floating loans are EBLR-linked

FIXED RATE

most car & personal loans

EMI stays the same
for the fixed period. Today's hike does not touch it.

New loans cost more
banks will price fresh fixed loans higher.

FD savers win
deposit rates usually rise after hikes.

EXAMPLE: HOME LOAN

₹50 lakh · 25 years · floating

7.50% now	₹36,950
7.75% after hike	₹37,766

+₹817 a month
about ₹2.45 lakh more over the full loan

Banks may raise the EMI or stretch the tenure instead.

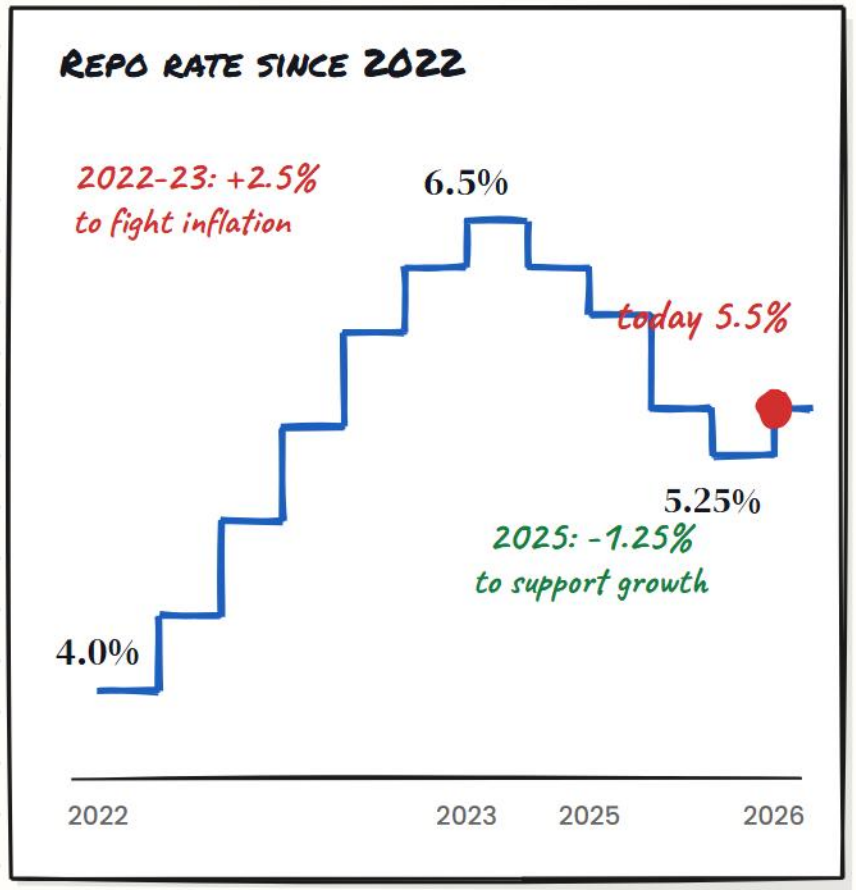

Sources: RBI data via Business Today; EMI worked out on standard formula

THE BIGGER PICTURE

Where rates came from, and who feels it most.

Rate-sensitive sectors fall hardest when a hike surprises the market.

Realty

Home buyers and builders both borrow

-2.28%

avg. on surprise hikes

Pvt banks & NBFCs

Costlier funds, slower loan growth

-1.42% / -1.24%

avg. on surprise hikes

Auto

Most cars and bikes are bought on loan

-0.89%

avg. on surprise hikes

Least hit: IT & Pharma

Earn abroad, carry little debt

-0.21% / -0.31%

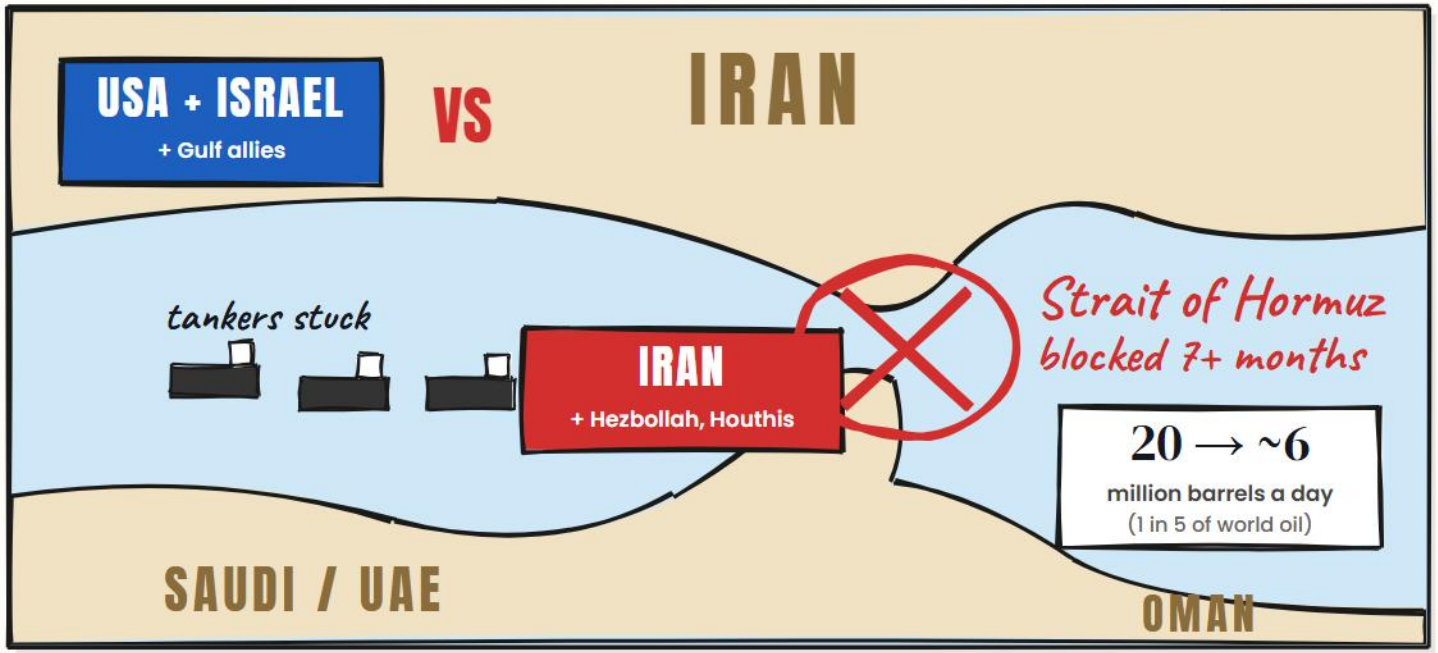

avg. on surprise hikes

OUR SITUATION

A war 3,000 km away is raising our costs.

88%
of our crude is imported

90%
of imported LPG came via Hormuz

40%
of our LNG comes from Qatar

70%
of urea imports come from the Gulf

If war ends
cheaper oil, lower inflation, steadier rupee, FPIs return

NOT THE FIRST TIME

Nifty has gone nowhere for 2 years before. Then it ran.

2002 2 years: -31%
next 5 years: +228%

2008 2 years: -30%
next 5 years: +124%

2011 2 years: -11%
next 5 years: +77%

2020 2 years: -15%
next 3 years: +102%

NOW 7 Oct 2024 to today: -8.8%
next: ?

Nifty was 1,546 in Jan 2000. Today it is 22,603: 14.6x, about 10.5% a year.

THE INDIA STORY

The market is tired. The economy isn't.

GDP GROWTH, Q1 FY27
7.8%
beat the 7.1% forecast · FY26 was 7.7%

RBI FY27 FORECAST
7.1%
raised today from 6.7%

GST, SEPTEMBER
₹2.04L cr
+14.7% from a year ago

UPI, SEPTEMBER
24 bn
payments in a month, +23%

MONTHLY SIP, AUGUST
₹32,297 cr
a record, even in a weak market

DEMAT ACCOUNTS
23.4 cr
July 2026

FDI, FY26
$88 bn+
gross, a record (Apr to Feb)

SERVICES EXPORTS, FY26
$421 bn
a record, half of all exports

S&P RATING
BBB
first upgrade in 18 years (2025)

SO WHY IS NIFTY WEAK?

Global money chased **AI and chip** markets. India's weight in the MSCI Emerging Markets index fell from

21% → 12%

Sep 2024 to May 2026. Taiwan, China and Korea are ahead now.

Prices fell. Earnings, jobs and spending kept growing. That gap closes, it always has.
